

WHAT IS CLAIMED IS:

1. A rear projection type projector device comprising light image output means for outputting a light image, reflecting means for reflecting the light image from the light image output means, and a screen member on which the light image reflected by the reflecting means is projected, the device allowing the light image projected from a rear side of the screen member to be viewed from a front side of the screen member, the device further comprising:
 - a transparent member located so as to incline from a vertical plane,
 - wherein the screen member is located so as to be placed on the transparent member.
